

Week beginning 29th November 2021

Maths

This week we consolidated our learning on Addition and Subtraction before moving on to Multiplication and Division. We began by understanding why multiplying any number by 0 always ends with the answer being 0 and why multiplying a number by 1 always results in the answer being the same as the number being multiplied.

Literacy

We started this week by creating a plan for writing a story from a different character's point of view. We planned to use all the learning from this unit which includes: show not tell sentences, nouns for precision, fronted adverbials for when and how as well as a range of coordinating and subordinating conjunctions. For the rest of the week, we used our plans to write our stories.
